Use of natural fiber technology in the automotive interior

Flax / hemp / sisal and others forfeited to a mat natural fiber mat in a ratio of 50% / 50% with PP flakes (polypropylene).

Processed into carrier parts and complete modules, including TPO film + PPTV20 retainers.

Application areas in the automotive sector:

Door panels, side panels, rear panel panels, center consoles, parcel shelves, trunk panels...

Ask:

- |||| Who produces these mats in Europe?**
- |||| Who supplies the systems and tools for this?**
- |||| Who processes these mats into end products in automotive interiors?**
- |||| In which automotive projects is this technology currently being used?**

Please send feedback to: info@michel-consulting.info

let's start a new project

You are looking for, we offer:
